www.rushserve.com

Rushserve Ltd is based in the northwest of England, 15 miles from Liverpool and 30 miles from Manchester. This part of the country has thousands of internationally known manufacturers which makes it an ideal place for us to operate from.

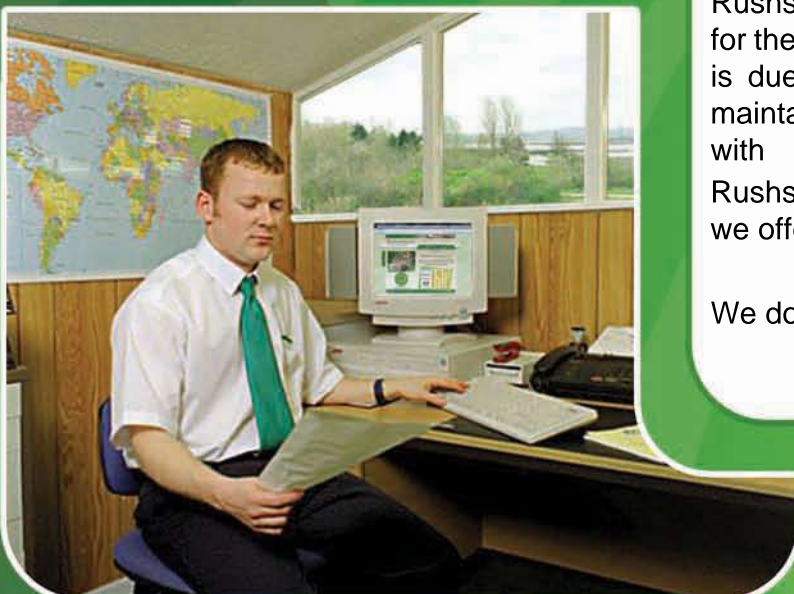

Rushserve was formed in 1988 by Dave Richardson, who had previously served a number of years as a Buyer in a two piece can plant in the UK. It was during this period that Dave identified a need for a company who could consolidate and stock a wide range of spare parts and consumables specifically for the two piece can making industry. Rushserve can reduce the number of suppliers you need, the number of orders you place and so reduce the number of shipments entering your plant.

Each supplier you use requires individual attention. First you have to check up to date prices and delivery leadtime, place the order, chase the order and finally arrange shipping. Rushserve purchases from over 500 manufacturers and consolidates these items for stock, for fast delivery to customers. Due to our wide range of in-stock parts, we can offer short leadtimes, which, in turn, enables customers to reduce their stockholding.

Each shipment sent to your Plant from overseas will incur charges and administrative procedures. By consolidating your orders with Rushserve you will automatically reduce these charges and procedures, as well as save valuable time. Shipments can be sent by DHL, UPS, FedEx or TNT. For heavy shipments we have specific freight forwarders and, of course, customers can use their own forwarder, if preferred.

Dave, American Can Co. 1980

Rushserve has always been respected for the quality of the parts we supply. This is due mainly to the fact that we have maintained long-standing relationships with manufacturers. Everyone in Rushserve has confidence in the goods we offer to our customers.

We do not accept second rate quality.

We, at Rushserve fully understand the complexities of being a Buyer in a two piece can plant, because we do almost the same duties every day, so when you need something quickly, we know that you need it shipping TODAY. We will do everything in our power to obtain urgent parts and ship them without delay. We can be contacted any time, 24/7 by simply calling our main telephone number. Your call will be routed to an on-call sales person.

An important part of what we do is being conscious of holding our prices for as long as possible. We do this by challenging all our suppliers, if they insist on an increase then we request that the increase is less than proposed. We do not have annual price increases, in fact many of our items are the same price now that they were 5 years ago. If we can hold prices, we will.

Our aim, as a company is to expand with the two piece can industry, taking care of our loyal customers, forming relationships with new customers and constantly looking for ways to improve what we do. Customers who choose Rushserve for some of their requirements can rest assured they are making the right decision.

CONSOLIDATING STOCK

Consolidating orders has many benefits, such as:

One Order, One Supplier

You can obtain as many items as you require, therefore leaving yourself free to get on with other jobs.

We can supply any transmission product used in a can plant.

Freight Charges

Incoming freight charges from many suppliers adds to the cost of the goods. We cut the cost. We are able to offer free delivery on many orders.

Four seperate suppliers - or Rushserve?

Delivery Time

Many of the items you require will be held in our stock for instant delivery. With regards to items that are not in stock, we will pursue our suppliers to obtain the parts when you need them.

Valves and kits are available for most applications.

Service

We offer a 24 hour telephone service line - 7 days a week, 365 days a year - should you require an item, any time, day or night. We are here to answer your call.

High Quality

Our reputation can only be as good as the products we handle, so we ensure that only well proven quality products are stocked.

PLEASE LOOK AT THESE PHOTOGRAPHS AND ASK YOURSELF THE QUESTION 'HOW MANY SUPPLIERS DO I USE TO OBTAIN THESE PRODUCTS?'

Competitive Prices

Bulk buying enables us to take advantage of manufacturer's best discounts, which are then passed on to you, the customer.

We are happy to quote for any air or fluid filter that you may require.

Speedy Delivery

Stock items are despatched sameday (if required). We only use recognised couriers (DHL, TNT, UPS or FedEx) or a freight forwarder recommended by our customers. Delivery into Europe is 1-2 days, the rest of the world is 3-4 days. A hand carry service is available for 'line down' situations.

A small selection of our ever increasing stock of vital spares and consumables.

Stockholding

As you can see by the variety of photographs in this brochure, we stock a wide range of quality products that are essential to the canmaking industry. Our stocks are regularly checked and updated as demand dictates. Should you require an item that we do not stock, we will obtain price and delivery for you. If the quotation meets with your approval, we will obtain your required quantity, plus an additional amount for our stock. The next time you require such an item, we will have it available for instant delivery and the price will remain the same.

All sizes of flat top chain, with or without vacuum holes.

**...YOU COULD USE
JUST ONE
RUSHSERVE**

**Rushserve has supplied a
for all Reynolds equipm**

**In stock
Ready to ship**

**and stocked quality parts
ment for over 20 years**

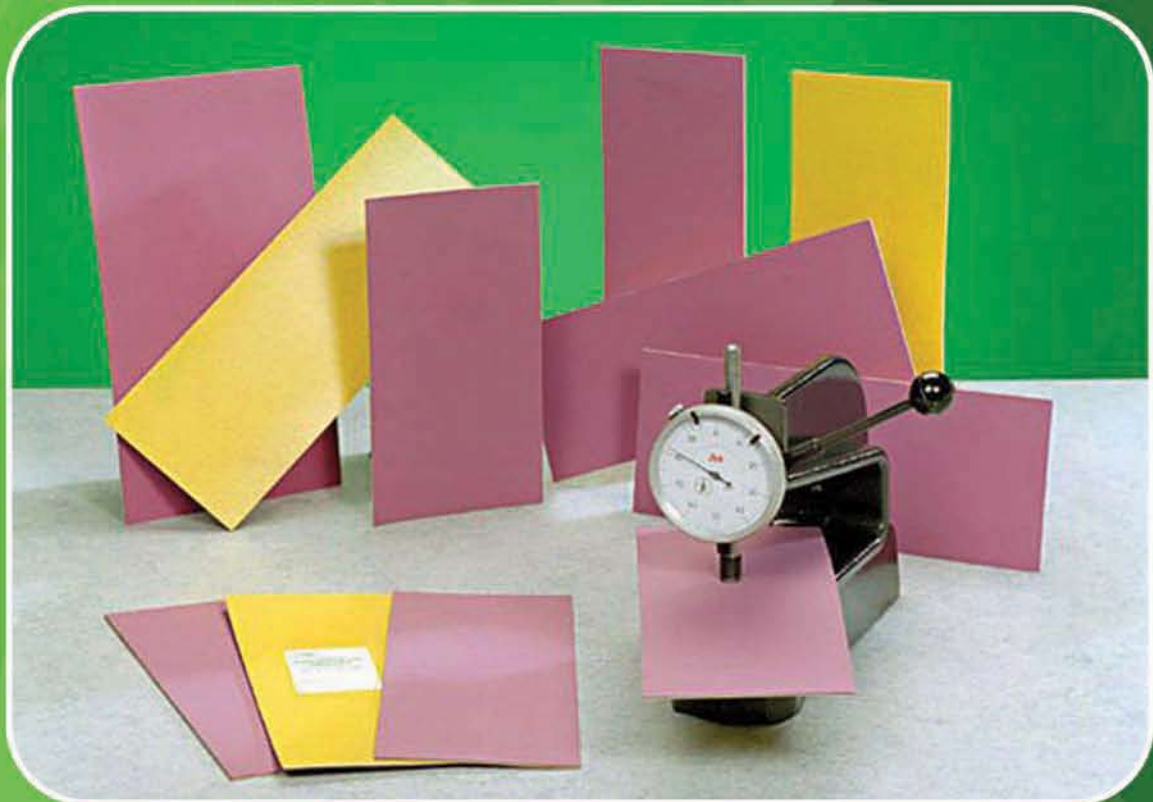

High quality parts for printer and coater machines.

BRC Rollers in polyurethane and neoprene. Inker Rollers in EPDM and polyurethane. Suction cups, transfer pads and unloader pockets.

The highest quality rubber and urethane moulded products.

All sizes of Day and Duco Printing Blankets in stock.

As an official Diamond pinchain distributor, we offer ex-stock delivery on standard and O-ring pinchain. Special pinchain can be shipped from Diamond Chain Company directly to your plant, reducing delivery leadtime.

We stock all colours of both visual and UV Easterday ink-dot ink. Hazardous packing is available at our premises for air freight shipping.

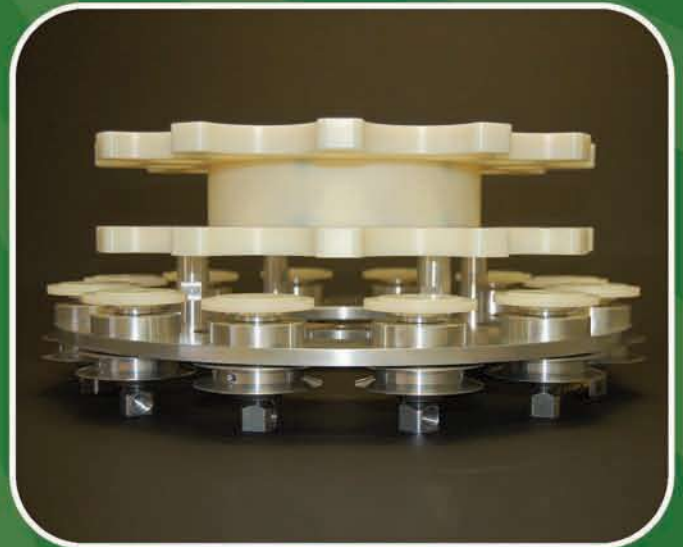

Unloader pockets, suction cups, transfer pads, stripper rings and any other cast polyurethane, rubber or plastic items can be manufactured from your sample or drawing, with no tooling or mould charge.

On March 6th 2008, Rushserve Ltd. acquired the name H. L. Fisher Mfg. Co., together with the intellectual property rights and drawings for all H. L. Fisher equipment and spare parts.

We welcome any enquiries for spares, information or technical assistance. We have retained the services and knowledge of personnel who have built and serviced H. L. Fisher equipment for many years.

We hope to be of service to you in the near future.
